

B2  
C1  
amd.

creating on a second computer a label containing prescription information of said patient  
and said photograph by combining said computer software object with said prescription  
information;  
printing said label; and  
attaching said label to said container.

---

B3 Sub  
C1

9. (Amended) A system for labeling a container of prescribed medicine, said system  
comprising:  
a camera for taking a photograph of a patient;  
means for converting said photograph into a computer software object;  
means, distinct from said means for converting, for creating a label containing  
prescription information of said patient and said photograph by combining said computer  
software object with said prescription information; and  
a printer for printing said label.

---

B4

19. (New) A method of labeling a container of prescribed medicine, said method comprising the  
steps:  
obtaining a photograph of a patient using a digital camera;  
converting said photograph into a computer software object on a first computer connected  
to said digital camera;

PH  
uploading said computer software object from said first computer to a second computer connected to said first computer;  
storing said computer software object in said second computer in a photograph database;  
creating a label for said patient using said second computer by combining said computer software object with prescription information for said patient stored in a prescription database, said label containing said prescription information and said photograph;  
printing said label on a printer attached to said second computer; and  
attaching said label to said container.

20. (New) A system for labeling a container of prescribed medicine, said system comprising:  
a digital camera for taking a photograph of a patient;  
a first computer connectable to said digital camera configured to convert said photograph into a computer software object;  
a second computer connectable to said first computer, said second computer having a prescription database stored therein containing prescription information for said patient, said second computer being configured to store said computer software object uploaded from said first computer in a photograph database and create a label for said patient by combining said computer software object with said prescription information, said label containing said prescription information and said photograph; and  
a printer attachable to said second computer for printing said label.
